What materials do we use?

All products are made using galvanised 60x40x3mm mild steel box or tubular frame. All rebound faces are made from 3mm thick mild steel sheets, which are rivetted to the box or tube section. Polystyrene filler is used inside every double sided rebound wall.

All our equipment pricing includes powder coated colours. We offer the Numuga brand colours as standard, but we can easily change the colour to match your scheme, school or sports club.

Fixings & Installation

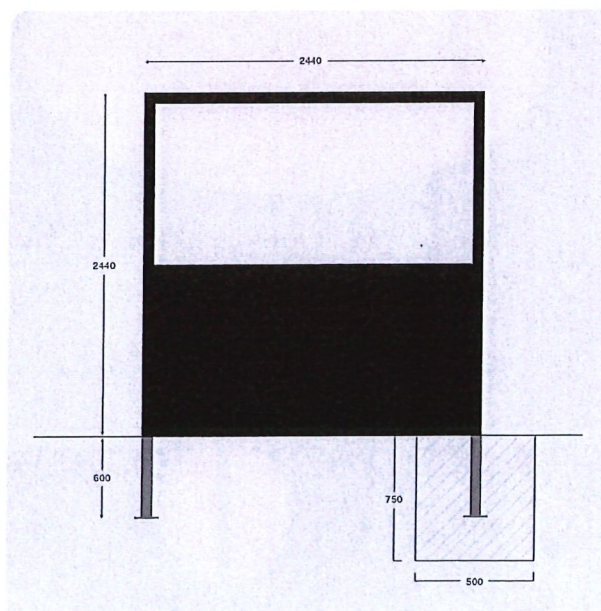

All our equipment include underground post fixings with sizes relative to the weight and height of the piece. We also provide installation guides outlining how much concrete to use when anchoring each fixing post.

Standards

All equipment will be manufactured to BS EN 15312 free standing multi-sport equipment regulations. Made in the UK.

Guarantees

Our steelwork is offered at 15 years against structural failure. We also offer 5 years on our powder coating. The guarantee would be void if there's malicious damage through vandalism or unexpected usage.

Delivery cost TBC on quantity.
Installation not included.
